

PRESS RELEASE

Stockholm & Beijing, 4 June, 2007

Operax and DMX Technologies agree strategic partnership for Asia-Pacific markets

Operax, the leading vendor of Network Service Quality control solutions, and DMX Technologies Group (DMX), today announced they have signed a reseller agreement for the growing Asian market. As a leading IT solutions provider of broadband network infrastructure to the telecommunications industry, DMX will further strengthen its position within the digital interactive value added services by offering Operax QoS control and Bandwidth Management solutions.

DMX specializes in providing a wide range of digital multimedia solutions, network infrastructure and professional services to service providers and enterprises. With this agreement to market and deploy Operax Bandwidth Management products, the DMX offer can enable Telecoms operators to create new services faster and more cost effectively.

Operax General Manager, Europe and Asia-Pacific Jeremy Deaner stated, "We are very happy to have DMX as a strategic partner. They have a strong position in the most exciting and fastest growing markets, such as China, Korea, Indonesia, Hong Kong and Malaysia. This agreement demonstrates our joint commitment to the Asian market, and to jointly develop high-value, quality assured and efficient solutions."

DMX Chief Executive Officer, Ms. Jismyl Teo commented, "We are pleased to cooperate with Operax. Operax Bandwidth Management products complement our solution offerings for NGNs. Together, we can help service providers who seek to take advantage from the NGN technologies to address the challenges of service quality and cost control."

Throughout the world region telecommunications operators are seeking to maximize their Returns on Investment in Next-Generation Networks. In converged broadband networks, providing guaranteed Quality of Service is a key capability, and essential for the successful commercial deployment and operation of new solutions, such as IPTV and IMS-based services. For carriers seeking these capabilities today, Operax provides flexible Bandwidth Management solutions for real-time, end-to-end QoS Control.
